Two ways to work with us

The wholesale partner program, in brief

Neighborhood Solar Store
Shipping Canada-wide

Become your customers' power department. We design and supply complete solar systems — and sell the individual pieces at wholesale too — shipping anywhere in Canada. Partners work with us two ways, and most use both depending on the project.

1 Buy at wholesale

Trade pricing on complete systems, partial kits, or individual components — panels, inverters, batteries, racking, wiring. Order what the job needs and mark up to your own customer. You own the relationship; we're your supply chain and technical backup.

2 Hand us the power side

Give us the customer and step back. We design, quote, supply and support their system directly, keep you in the loop, and pay you a referral reward on the work. Completely off your plate, with none of the learning curve.

Mix them, project by project. Take the straightforward jobs at wholesale and hand us the complex or remote ones — whatever keeps the build moving and the customer happy.

What you get either way

- **Free custom design and sizing** — on any project, including working out array and storage for off-grid and battery systems. Yours to keep.
- **Wholesale on individual parts too** — you don't have to buy a whole system to get trade pricing.
- **Free technical support, permanently** — install questions, troubleshooting, upgrades years later.
- **Shipping anywhere in Canada** — freight quoted per order at the real rate, to the site or your shop.
- **Complete, matched systems** — every component sized to work together, ready to install.
- **Full documentation on complete systems** — wiring diagrams, blueprints and electrical documents.
- **Installation guidance** — and help finding an installer for your project when you need one.
- **Pricing built to the project** — quoted against what you're buying and the scale of the job.

Systems we design and supply

- **Off-grid systems** — cabins, remote homes, lodges, camps, sites with no utility connection
- **Grid-tie systems** — straight bill reduction where the grid is reliable
- **Time-of-use systems** — charge off-peak, run from battery through expensive peak hours
- **Solar fencing** — solar-powered fence energizers for pasture, paddock and remote fence lines
- **Hybrid systems** — grid plus battery, lower bills and power through an outage
- **Battery backup** — homes and businesses that can't afford downtime
- **Agricultural systems** — ground-mount arrays, shops, bins, well and irrigation pumps, livestock
- **Commercial systems** — critical-load backup, demand-cost reduction, multi-building sites

Every system is built from established, reputable manufacturers using **CSA-approved certified equipment** — the same grade professional installers deploy on twenty-five-year systems.
